

## 2-Stage Furnace Diagnostics

FLASHES	DIAGNOSTIC INFORMATION	LOCKOUT
	Low Input voltage	SOFT
	Ignition Failure	SOFT
	Open High Limit	SOFT
	Stuck Sail Switch	HARD
	Module Fault	HARD

Soft lockout is a condition that is timed and will make the furnace restart after a set time. A HARD lockout requires the technician to correct the problem. A HARD lockout requires the technician to reset the thermostat or turning the power switch off then back on.
