

Refrigerator Moving and Storage

WARNING

Harmful gases. The gases in the cooling system are flammable and can be harmful to your health if inhaled. To prevent the release of these gases, never place undue stresses on the cooling system. Do not manipulate the refrigerator by grabbing the cooling system.

Before moving this refrigerator, it should be emptied, cleaned, and dried. It is imperative that the refrigerator remain in an upright position while being moved. Failure to do so can result in a cooling system failure. Also, the refrigerator must not be manipulated by grabbing the cooling system. This could result in a fracture of the cooling system and the release of hazardous refrigerant.

If this refrigerator is going to be out of service for long periods of time, it should be emptied of all contents and cleaned. Also, if possible, the doors should be left open to allow air to circulate in the refrigerator. This will prevent the build up of odor in the refrigerator cabinet.
