REV 7

# **WARNING!**

**HYDRAULIC COMPONENTS CAN CAUSE SERIOUS INJURY OR DEATH IF PROPER SAFETY PRECAUTIONS ARE NOT FOLLOWED. ALL HYDRAULIC PRESSURE MUST BE RELEASED FROM THE SYSTEM, INCLUDING RAISING ALL JACKS AND REMOVING POWER FROM THE SYSTEM BEFORE REMOVAL OR DISASSEMBLY IS ATTEMPTED.**

**ALWAYS WEAR SAFETY EQUIPMENT. SAFETY GLASSES, GOGGLES AND/OR FACE SHIELDS CAN PREVENT SERIOUS INJURY AND SHOULD BE USED TO PREVENT EYE DAMAGE.**

**POWER GEAR WARRANTS THE SEALS AND COMPONENTS OF THESE KITS FOR 90 DAYS AGAINST DEFECTS IN MATERIALS AND WORKMANSHIP. NO GUARANTEE EXISTS ON THE ULTIMATE SUCCESS OR FAILURE OF THE JACK. THE SUCCESS OF THE RESEAL DEPENDS ON THE CARE TAKEN DURING INSPECTION, THE SKILL OF THE TECHNICIAN AND THE CLEANLINESS DURING THE RE-ASSEMBLY. ANY DEFECT ON THE SURFACE OF THE ROD WILL RESULT IN SEAL FAILURE OR REDUCE THE LIFE OF THE SEALS.**

**NOT ALL JACKS CAN BE DISASSEMBLED DUE TO VARIANCES IN ASSEMBLY TECHNIQUE, DISASSEMBLY TOOLS AVAILABLE OR DAMAGE DUE TO ENVIRONMENTAL CONDITIONS OR ABUSE. WHILE ONLY A VERY SMALL PERCENTAGE OF JACKS ARE IMPOSSIBLE TO DISASSEMBLE, JACKS SHOULD BE DISASSEMBLED BEFORE SEAL REPLACEMENT OR JACK REPLACEMENT COSTS ARE DETERMINED.**

## **TOOL REQUIREMENTS:**

**NOTE: Some tools may not be required for some jacks. This is a complete tool list to equip a technician for repairs to all types of Power Gear leveling cylinders.**

- 1/4" punch
- 1/8" punch
- hammer
- strap wrench
- Small pick or screwdriver
- Grease gun
- Large spanner wrench
- Bench vise
- 15/16" socket
- 9/16" socket
- 7 mm socket
- Impact wrench
- Torque wrench
- Clean lint free shop towels
- Locktite® 243 or equivalent
- Wire brush
- Spray cleaning solvent
- Compressor
- Large pipe wrench or chain wrench
- Small propane torch

QTY	PART #	DESCRIPTION
* included within 800157 Elastomer pkg		
* 1	01-1011	O-RING
* 1	02-1028	ROD GUIDE T-SEAL
* 1	03-1010	24K ROD WIPER
* 2	05-1035	BACK-UP WASHER
* 1	05-1036	BACK-UP WASHER
* 1	02-1019	THREAD SEAL (NOT PICTURED)

**NOTE - (NOT SHOWN) PRESSURE WASH THE EXTERIOR OF THE LEG TO PREVENT DIRT FROM CONTAMINATING INTERIOR OF THE LEG DURING THE RE-ASSEMBLY PROCESS.**

**STEP 1 - (NOT SHOWN) - USING A PROPANE TORCH, HEAT THE CENTER BOLT FOR ONE (1) MINUTE. LET COOL FOR 30 SECONDS.**

**STEP 2 -USING AN IMPACT WRENCH, REMOVE CENTER TOP BOLT.**

**THE BOLT IS APPROXIMATELY 6 INCHES LONG**

**NOTE - IT MAY BE HELPFUL WHEN MOUNTING THIS JACK IN THE VISE TO ELEVATE THE FOOT END. THIS WILL PREVENT REMAINING OIL IN THE CYLINDER FROM DRAINING OUT WHEN THE ROD IS REMOVED.**

**STEP 3 – MANUALLY EXTEND ROD FROM THE CYLINDER UNTIL IT STOPS**

**STEP 4 – INSPECT THE ROD TO MAKE SURE IT HAS ABSOLUTELY NO DINGS, DENTS, CORROSION, OR SCRATCHES. DISCARD THE JACK IF IT DOES**

**STEP 5 – PUSH IN THE ROD ABOUT HALF WAY BEFORE HEATING THE ROD GUIDE. THIS WILL PREVENT DAMAGE TO THE PISTON. USE A SMALL PROPANE TORCH TO HEAT BOTTOM 1” OF CYLINDER. HEAT AROUND ENTIRE DIAMETER OF THE CYLINDER TO SOFTEN LOCKTITE USED DURING ASSEMBLY.**

**STEP 6 – USE A CHAIN WRENCH OR PIPE WRENCH TO LOOSEN ROD GUIDE FOR REMOVAL.**

**STEP 7 - REMOVE ROD ASSEMBLY FROM CYLINDER.**

**STEP 8 - SET FOOTPAD ON THE FLOOR. WITH SPANNER WRENCH, REMOVE PISTON FROM ROD. NOTE: SOME MODELS WILL HAVE THE PISTON HELD IN PLACE WITH A LARGE SNAP RING. REMOVE WITH APPROPRIATE SIZE EXTERNAL SNAP RING PLIERS**

**NOTE - PISTON IS THREADED INTERNALLY AND WILL UNSCREW OFF THE TOP OF THE ROD. PULL ROD GUIDE ASSEMBLY UP AND OFF THE ROD.**

**IF YOUR SEAL KIT INCLUDES A NEW ROD GUIDE, SKIP TO STEP 12**

**STEP 9 - WITH PICK TOOL REMOVE EXTERNAL O-RING AND BACK-UP RING FROM ROD GUIDE.**

**STEP 10 - WITH PICK TOOL REMOVE SEALS AND ANY BACK-UP RINGS.**

**NOTE - SEAL MAY BE EITHER T-TYPE OR V-TYPE SEAL.**

**STEP 11 - USING A WIRE BRUSH, CLEAN UP THE THREADS ON THE EXTERIOR OF THE ROD GUIDE. CLEAN THE LOWER INTERNAL PART OF THE ROD GUIDE IF NECESSARY.**

**NOTE - WIRE BRUSH DOES NOT NEED TO BE PNEUMATIC. ANY WIRE BRUSH CAN BE USED.**

**BE CAREFUL WHEN CLEANING THE INSIDE OF THE ROD GUIDE. THE SOFTER BEARING MATERIAL CAN BE DAMAGED.**

**NOTE:** STEP 13 SHOWS AN O-RING FOR THE BOLT. ON OLDER JACK LEGS, PART # 500385, A 1/2" BOLT SEAL WAS USED INSTEAD OF AN O-RING. NOTE THE PART #: IF THE PART # READS 500385, WITH NO LETTER SUFFIX, THE SEAL MUST BE USED INSTEAD OF THE O-RING. PLEASE CHECK THE BILL OF MATERIALS ON PAGE 6 FOR THE PART NUMBER OF THE SEAL. THE SEAL WILL BE INCLUDED IN ALL KITS WITH PART # 800137S.

**NOTE** - MAKE SURE SEALS ARE INSTALLED IN THE PROPER DIRECTION. SEALS INSTALLED INCORRECTLY WILL CAUSE THE LEG TO FAIL. PLEASE NOTE THE CROSS SECTIONAL DRAWING OF THE ROD GUIDE ON PAGE 6 TO NOTE THE PROPER INSTALLATION OF THE SEALS AND RINGS.

**NOTE - CHECK ORDER OF ASSEMBLY ON PAGE 6.**

STEP 18 -INSTALL NEW SEAL. THE GROOVE IN A LIP SEAL WILL BE INSTALLED UP. ALWAYS INSTALL THE LIP SEAL FROM THE TOP SIDE OF THE ROD GUIDE TO AVOID CUTTING THE LIP UPON INSTALLATION.

NOTE - CLEAN ROD AND LUBRICATE IT WITH DEXRON III.

STEP 18A -IF YOUR SEAL KIT USES A "T-TYPE" SEAL INSTALL IT IN THE PROPER GROOVE. INSTALL NEW BACK-UP RING(S). MOST ROD GUIDES WILL HAVE THE UPPER BACK UP RING ELIMINATED TO PROMOTE FASTER RETRACTION.

NOTE - GUIDES WITH V-TYPE SEALS DO NOT REQUIRE A BACK-UP RING.

STEP 20 - ASSEMBLE ROD GUIDE ONTO THE ROD THREAD SIDE UP. IF YOU HAVE A THREADED PISTON STYLE ROD, APPLY A 2"-3" BEAD OF LOCKTITE® TO THE THREADED PORTION OF THE ROD.

STEP 21 - THREAD PISTON ONTO THE ROD BY HAND UNTIL IT IS SEATED.

STEP 22 - USING A THE SPANNER WRENCH, TIGHTEN THE PISTON SNUGLY ON TO THE ROD. SNAP RING STYLE JACKS NEED THE SNAP RING INSTALLED AT THIS POINT.

STEP 23 - CLEAN THE INSIDE OF THE CYLINDER WITH A LINT FREE CLOTH. MAKE SURE THERE IS ABSOLUTLEY NO DEBRIS OR OLD LOCKTITE LEFT INSIDE THE CYLINDER.

**NOTE – PAINT THE RODE GUIDE ONCE THE JACK IS COMPLETELY REASSEMBLED. GREASE THE ROD GUIDE. RE-INSTALL LEG ON THE COACH AND TEST TO OPERATE. FLUSH AND REFILL THE HYDRAULIC SYSTEM WITH FRESH FLUID (DEXTRON III). CYCLE EACH LEG 2-3 TIMES FROM FULL EXTENSION TO FULL RETRACTION AFTER FILLING RESERVOIR TO PURGE AIR FROM THE SYSTEM. BE SURE TO CHECK FLUID LEVEL AFTER EACH CYCLE OF THE LEGS.**

** 1	500757	ROD WIPER SEAL
** 1	500758	WEAR RING-ROD

The 800132S kit will have a separate kit within the box labeled 800285. Use components in this kit for HR style jacks.

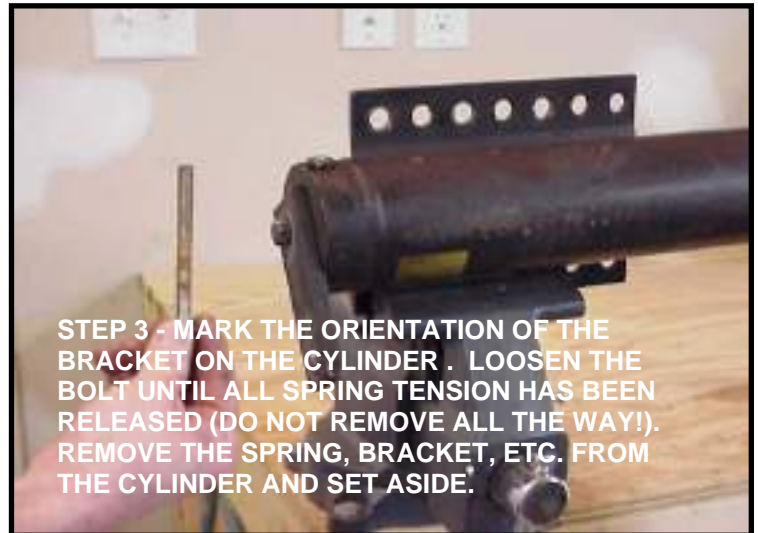

Kit numbers 800129S and 800132S include parts for two different style jacks. When re-assembling the jack you will need to determine which style you are working on. Use the following guidelines to choose the correct components: There are a few different ways to determine that you are working on an “HR” series jack.

1. If the jack part number ends with the letters HR.
2. HR jacks have a #4 JIC hose fitting. Non “HR” jacks use a #6 JIC.
3. If the **piston** looks like the one pictured to the left, then it is an HR series jack.

**STEP 1 - (NOT SHOWN) PRESSURE WASH THE EXTERIOR OF THE LEG TO PREVENT DIRT FROM CONTAMINATING INTERIOR OF THE LEG DURING THE REASSEMBLY PROCESS.**

**STEP 2 - LOOSEN THIS BOLT WITH AN IMPACT WRENCH ENOUGH TO RELIEVE ALL SPRING TENSION.**

**STEP 3 - MARK THE ORIENTATION OF THE BRACKET ON THE CYLINDER . LOOSEN THE BOLT UNTIL ALL SPRING TENSION HAS BEEN RELEASED (DO NOT REMOVE ALL THE WAY!). REMOVE THE SPRING, BRACKET, ETC. FROM THE CYLINDER AND SET ASIDE.**

**NOTE - IT MAY BE HELPFUL WHEN MOUNTING THIS JACK IN THE VISE TO ELEVATE THE FOOT END. THIS WILL PREVENT REMAINING OIL IN THE CYLINDER FROM DRAINING OUT WHEN THE ROD IS REMOVED.**

**STEP 4 - AFTER REMOVING THE SPRING, PULL OUT THE ROD UNTIL IT STOPS. ROD SHOULD BE FREE OF DINGS, DENTS, CORROSION AND SCRATCHES. IF NOT, DISCARD THE LEG. PUSH THE ROD BACK IN ABOUT HALF WAY BEFORE PROCEEDING TO STEP 5 IN ORDER TO PREVENT DAMAGE TO THE PISTON.**

**STEP 5 - USE A SMALL PROPANE TORCH TO HEAT BOTTOM OF CYLINDER. HEAT AROUND THE ENTIRE DIAMETER OF THE CYLINDER TO SOFTEN LOCKTITE USED TO SEAL ROD GUIDE.**

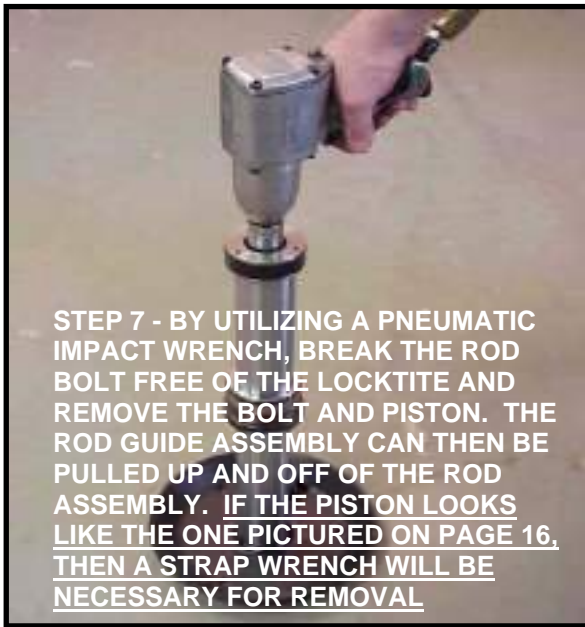

**STEP 6 - REMOVE THE GREASE FITTING AND USE A CHAIN WRENCH TO LOOSEN ROD GUIDE FOR REMOVAL.**

**NOTE - IF A CHAIN WRENCH IS NOT AVAILABLE A LARGE PIPE WRENCH CAN ALSO BE USED.**

**THE ROD ASSEMBLY MAY THEN BE REMOVED FROM THE CYLINDER.**

**STEP 7A- HR STYLE JACKS WILL USE A PISTON WHICH REQUIRES A STRAP WRENCH TO REMOVE**

**SKIP TO STEP 11 IF YOU ARE SUPPLIED WITH A NEW ROD GUIDE.**

**NOTE - MAKE SURE SEALS ARE INSTALLED IN THE PROPER DIRECTION. SEALS INSTALLED INCORRECTLY WILL CAUSE THE LEG TO FAIL. PLEASE NOTE THE CROSS SECTIONAL DRAWING OF THE ROD GUIDE ON PAGES 14 AND 15 TO NOTE THE PROPER INSTALLATION OF THE SEALS AND RINGS.**

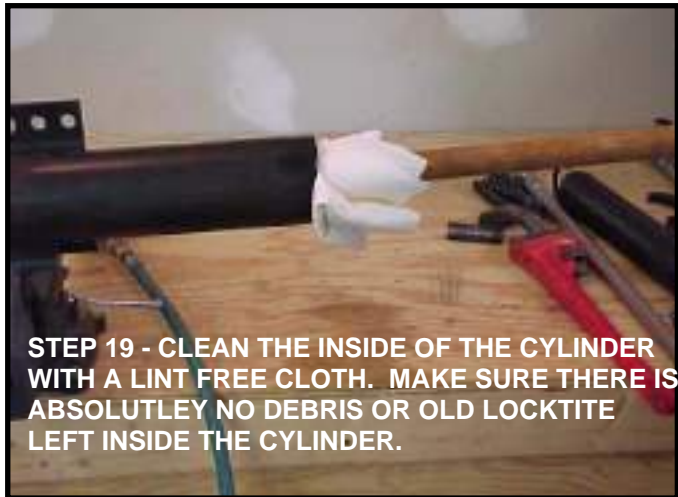

**NOTE - WIRE BRUSH DOES NOT NEED TO BE PNEUMATIC. ANY WIRE BRUSH CAN BE USED. BE CAREFUL NOT TO DAMAGE THE SOFT BEARING MATERIAL.**

**NOTE - CHECK ORDER OF ASSEMBLY ON PAGE 14.**

**NOTE - GREASE THE ROD GUIDE AND PAINT THE ROD GUIDE AREA ONCE THE JACK HAS BEEN FULLY ASSEMBLED. RE-INSTALL LEG ON THE COACH AND TEST TO OPERATE. FLUSH AND REFILL THE HYDRAULIC SYSTEM WITH FRESH FLUID (DEXTRON III). CYCLE EACH LEG 2-3 TIMES FROM FULL EXTENSION TO FULL RETRACTION TO PURGE AIR FROM THE SYSTEM. BE SURE TO CHECK FLUID LEVEL AFTER EACH CYCLE OF THE LEGS.**

*1	040-1029	PISTON WEAR RING
*1	040-1030	ROD WEAR RING
*1	05-1027	BACK UP WASHER
*1	050-1041	BACK UP RING
1	10-1002	GREASE FITTING

**NOTE -THE FOLLOWING DISASSEMBLY PROCEDURE IS FOR 6K LEGS. 9 AND 12K LEGS WILL USE THE SAME REBUILD PROCEDURE AS ON EXTERNAL SPRING STYLE LEGS. (NOT SHOWN) PRESSURE-WASH THE EXTERIOR OF THE LEG TO PREVENT DIRT FROM CONTAMINATING INTERIOR OF THE LEG DURING THE RE-ASSEMBLY PROCESS.**

**NOTE - MAKE SURE SEALS ARE INSTALLED IN THE PROPER DIRECTION. SEALS INSTALLED INCORRECTLY WILL CAUSE THE LEG TO FAIL. PLEASE NOTE THE CROSS SECTIONAL DRAWING OF THE ROD GUIDE ON PAGES 21 AND 22 TO NOTE THE PROPER INSTALLATION OF THE SEALS AND RINGS.**

**NOTE - BE SURE BACK-UP AND O-RINGS ARE ORIENTED CORRECTLY AND IN THE PROPER ORDER ON THE ROD GUIDE. REFER TO CROSS SECTION DETAIL OF ROD GUIDE AT BEGINNING OF THIS SECTION.**

**STEP 12-INSTALL THE NEW WEAR RING BY COMPRESSING IT UNTIL THE ENDS OVERLAP. INSTALL NEW LIP SEAL WITH THE GROOVE POINTED UP. INSTALL FROM THE TOP SIDE TO PREVENT DAMAGE TO THE SEAL EDGES.**

**STEP 13 - INSTALL WIPER SEAL. MAKE SURE SEAL IS ORIENTED PROPERLY. FAILURE TO DO SO WILL CAUSE THE LEG TO FAIL.**

**STEP 14 - CLEAN INTERIOR OF LEG CYLINDER. USE A DUSTLESS CLOTH OR SHOP RAG. BE SURE TO REMOVE ALL DEBRIS.**

**STEP 15 - REPLACE ROD GUIDE ON TO ROD. REPLACE BOTH PIECES OF THE PISTON AND CUP THE REASSEMBLED ROD GUIDE IN YOUR HAND. INSERT THE ROD ASSEMBLY BACK INTO THE CYLINDER.**

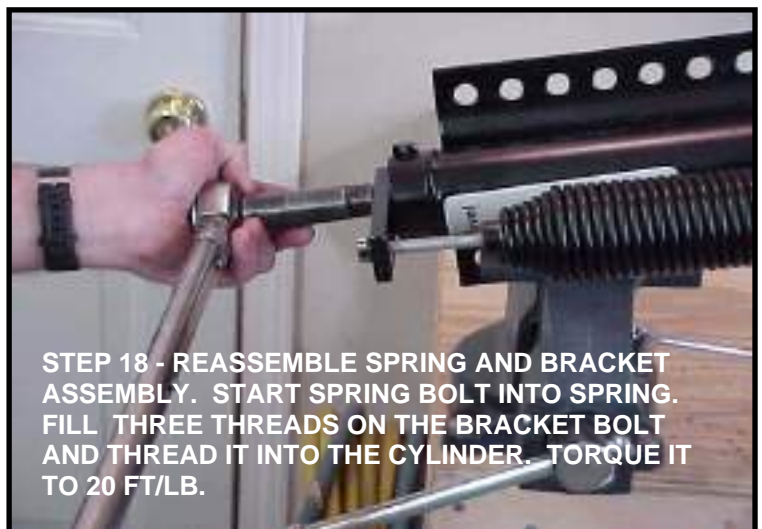

**STEP 16 - REPLACE RETAINING RING IN THE EXACT SPOT FROM WHICH IT WAS REMOVED. MAKE SURE PUNCH HOLE IS NOT SETTING IN THE RETAINING RING'S GAP.**

**NOTE - MAKE SURE SEALS ARE INSTALLED IN THE PROPER DIRECTION. SEALS INSTALLED INCORRECTLY WILL CAUSE THE LEG TO FAIL. PLEASE NOTE THE CROSS SECTIONAL DRAWING OF THE ROD GUIDE ON PAGES 20 AND 21 TO NOTE THE PROPER INSTALLATION OF THE SEALS AND RINGS.**

**STEP 17 – IMPORTANT!!! - PULL ROD ASSEMBLY BACK OUT AND WIGGLE AS YOU PULL. THIS ALLOWS THE ROD GUIDE TO SLIP INTO THE MIDDLE OF THE RETAINING RING AND LOCKS IT INTO PLACE.**

**STEP 18 - REASSEMBLE SPRING AND BRACKET ASSEMBLY. START SPRING BOLT INTO SPRING. FILL THREE THREADS ON THE BRACKET BOLT AND THREAD IT INTO THE CYLINDER. TORQUE IT TO 20 FT/LB.**

**STEP 19 - FINISH THREADING THE SPRING BOLT UNTIL TIGHT. INSTALL JACK ON COACH AND TEST.**

**NOTE - RE-INSTALL LEG ON THE COACH AND TEST TO OPERATE. FLUSH AND REFILL THE HYDRAULIC SYSTEM WITH FRESH FLUID (DEXTRON III). CYCLE EACH LEG 2-3 TIMES AFTER FILLING RESERVOIR TO PURGE AIR FROM THE SYSTEM AND PUSH THE FLUID THROUGH THE LINES. BE SURE TO CHECK FLUID LEVEL AFTER EACH CYCLE OF THE LEGS.**
