Read Rules for  
Safe Operation  
and instructions  
Carefully

- Assembly
- Installation
- Repair Parts

**WARD & SON, INC.**  
15343 PROCTOR AVENUE  
CITY OF INDUSTRY, CALIFORNIA 91744

# instructions

## RULES FOR SAFE OPERATION

1. Read the Owners Manual and these Rules for Safe Operation carefully.
2. Check that all applicable state and local codes regarding installation have been followed. The supplier of the propane gas is usually an expert in this regard.
3. Check that minimum clearances to combustible materials have been maintained.
4. When igniting the burners, have lighted match ready when the burners are turned on, if not equipped with lighters.
5. Never light matches in the vicinity if the odors of gas are noted.
6. A window or other air vent should be opened slightly while using the range counter unit. Gas burner flames consume oxygen which has to be replaced to assure proper combustion.
7. Do not tamper with the burner orifices or change their size.

## GENERAL

1. Your Range with Oven has been Certified for Performance and Safety by The Underwriters Laboratory for use with liquefied petroleum gases only.
2. Burner inputs are shown on a plate attached to each appliance. Refer to this plate for ratings and minimum clearances. The orifices have been sized at the factory at a pressure of 11 inches water column (6-1/2 ounces approximately) for liquefied petroleum gases.

## ASSEMBLY

Your new range is fully assembled with the exception of the burner grates, and grate clip holdowns. These will be placed on unit after range installation is completed.

## INSTALLATION

1. Consider the following when selecting the location for your range with oven:
  - A. Location of gas supply and routing of gas line.
  - B. Minimum clearances of unit from combustible materials. These clearances are:

### 3 BURNER RANGE

Sides - 6 inches minimum as measured from center of closest burner head.

Rear - 7 inches minimum as measured from center of closest burner head.

Top - 24 inches minimum as measured from top of unit to bottom of any overhanging cabinet or shelf.

### 4 BURNER RANGE

Sides - 7 inches minimum as measured from center of closest burner head.

Rear - 8 inches minimum as measured from center of closest burner head.

Top - 24 inches minimum as measured from top of unit to bottom of any overhanging cabinet or shelf.

2. After selecting the best location, cut opening in countertop as shown.
3. Install gas supply and route gas line (not furnished) to range. Here you should seek the assistance of a qualified service man. Usually the supplier of the gas will be able to provide expert help in this respect. Too, he will be able to provide the necessary parts, including the copper gas line. The following should be carefully considered:
  - A. The gas tank must be located in a protected place and cannot UNDER ANY CIRCUMSTANCES be located within the confines of the trailer or camper. The supplier of the gas will be acquainted with the applicable codes with respect to the location of the gas supply tank.
  - B. Gas supply line should be copper and should be routed in protected locations so as not to be damaged. A single, continuous line is recommended.
  - C. No connections should be made in the gas line where the connections would be concealed after completion of the installation. All parts used in making connections must be of type acceptable for this purpose. Gas line should not make any sharp bends nor have any kinks. The line should not be under strain.
  - D. Install a manual shutoff valve in an accessible location in the gas supply line external to the range for the purpose of turning the gas on and off during servicing.
4. Remove burner knobs, and main top assembly, This will expose gas manifold on unit.
5. Place unit in installation area.
